SciQuest Evolves into JAGGAER!

We have worked hard, listened, innovated, and are now taking our solution suite to the next level. It was clear to many that we had outgrown our existing brand, and that the name didn't accurately reflect the depth and breadth of our solutions. Accordingly, we have officially rebranded the company as JAGGAER! Our new name, pronounced as (\ja'-ger\), represents the next step for SciQuest: a dynamic, comprehensive, laser-focused solution with the strength to deliver 100 percent spend management, and the drive to back up the claim.

JAGGAER will continue to build on our relationships with you – the valued suppliers who help form the critical link for commerce and support for our shared customers. We will continue to provide

benchmarking solutions for over 560 commercial, government, life sciences, pharma, college and university customers globally.

We'll be making a lot of noise this year, and want you to become part of our roar. We value our relationship and look forward to working with you in the future. We're glad to have you on this journey with us; let's continue to succeed together.

Check us out here: www.JAGGAER.com.

New Hostnames Need to be Used for cXML Transaction

JAGGAER is working with suppliers to move integration traffic to servers specifically dedicated to handle this traffic in an effort to optimize the performance of the application for both suppliers and clients. All XML integrations must be transitioned to these integration servers for UIT by February 17, 2017 and Production by March 14, 2017.

Note that suppliers transacting with JAGGAER via EDI are not impacted by this change and do not need to take any action.

1. All XML integrations; cXML Invoice, cXML Order Confirmation and cXML Advanced Shipment notification integrations sent to the SelectSite platform needs to be updated with a new hostname (this is in the URL to which you post).
 - For the UIT environment, the hostname would need to be updated to replace `usertest.sciquest.com` with `usertest-messages.sciquest.com`.
 - Invoice:
 - <https://usertest-messages.sciquest.com/apps/Router/CXMLInvoiceImport>
 - Order Confirmation:
 - <https://usertest-messages.sciquest.com/apps/Router/CXMLReceive>
 - Shipping Notification:
 - <https://usertest-messages.sciquest.com/apps/Router/ASNReceive>
 - For the Production environment, the hostname would need to be updated to replace `solutions.sciquest.com` with `integrations.sciquest.com`.
 - Invoice:
 - <https://integrations.sciquest.com/apps/Router/CXMLInvoiceImport>
 - Order Confirmation:
 - <https://integrations.sciquest.com/apps/Router/CXMLReceive>
 - Shipping Notification:
 - <https://integrations.sciquest.com/apps/Router/ASNReceive>
2. SSL Certificates may need to be adjusted based upon how you trust certificates. Click on the links below to download the certificates for each environment.
 - UIT (`usertest-message.sciquest.com`) [Click here to download](#).
 - Production (`integrations.sciquest.com`) [Click here to download](#).

3. Open up your firewall to be able to send to these IP Addresses (if needed):
 - o UIT: Inbound IP Address: 66.45.4.78; Outbound IP Address: 66.179.165.172
 - o Production: Inbound IP Address: 66.45.4.77; Outbound IP Address: 66.179.165.140

Thanks for your help and patience. If you have any additional questions, please contact Support by phone at (800) 233-1121, Option 3 or by creating a support request by filling in this [Supplier Support Request form](#).

Product Description Need Not be Cluttered

Product Description is the main attribute that the buyer sees in search results. However, there often is tendency to cram it with lot of information to make it searchable. This actually ends up providing very adverse experience and drives buyers away from your products. Here is an example of such cluttered Product Description value;

- **Gloves Nitrile, Pack of 100, P1234, Med size – ntrl pwdfr non-latex gloves – powder free Ambidextrous with beaded cuff, DURABLE POLY COATED 100PK MEDIUM, microtext provides enhanced grip**

Here are tips to avoid clutter and make it easy for the buyer to quickly parse the details.

1. No need to include Part Number, P1234 in above example. Part Number, as well as Manufacturer Part Number, are searchable attributes and are searched along with Product Description whenever a search is performed.
2. If you want to make short forms searchable, 'ntrl pwdfr' in above example, add them to the Searchable Keywords attribute. This attribute is searched along with Product Description whenever a search is performed.
3. Avoid having part of the Product Description in all caps. This is often seen when data from diverse sources is used to put together Product Description to be used in the SciQuest hosted catalog. And certainly, do not provide entire Product Description value in all caps.
4. The size information, Medium, and packaging information, pack of 100, has been repeated. This again likely is because the information was gleaned from diverse sources. Avoid clutter that is caused by such repetitive information.

Keep in mind that your product is one among many, from different suppliers. The easier you make it for buyer to grasp the product, the better are the chances that it will be selected. Here is a cleaner version of Product Description for the example above. Note that the Searchable Keywords attribute has been populated with appropriate terms, as detailed in #2 above.

- **Gloves Nitrile, Medium, Color – purple, powder free, Ambidextrous with beaded cuff, micro-textured for enhanced grip [100/PK]**

In the SampleSQCustomer site, use 'OptimumProductDescription' as search term to see how such Product Description values are viewed by the buyers. The Catalog Summary section at the top provides details about accessing the SampleSQCustomer site.
