Data Completeness Reports

As part of standard process to ensure that the buyers are not having adverse experience as a result of issues with the hosted catalog content, we analyze if three times a year. The results of the analysis identify any data gaps that are leading to issues such as ineffective search, inability by buyers to drive workflow, incomplete spend analysis etc. First such scheduled data quality evaluation for this year was just completed. The results are being provided as a single pdf file, Data Completeness Reports (DCRs), on the basis of your hosted catalog content with us as of 27th January 2017.

Note that these reports will be shared with customers by the end of March 2017. If you have questions about the DCR or any aspect of the data quality evaluation, please contact Dr. Subodh Joshi at sjoshi@JAGGAER.com.

Please use the links below to access the overview document and the DCRs.

DCR January 2017 - Overview Document

This standard document provides summary numbers for all hosted content over the past year. It also explains how to read these reports, how evaluations are performed and how to close the data gaps. To access it, please [click here](#).

DCR January 2017 For Your Catalog(s)

This document is specific for each catalog. You can access the document by clicking on the link(s) below. Note that if you have multiple catalogs with us, a separate link for DCR of each catalog has been provided.

Is Your Punch-out Catalog Accessible via Mobile Device?

Products from more than 50 punch-out catalogs can be purchased in the JAGGAER Procurement Applications via mobile device such as a tablet or a smartphone. If you have a punch-out catalog, is your catalog one of them?

As buyers increasingly use mobile devices for shopping and approvals etc., JAGGAER has made punch-out functionality accessible via mobile devices back in November 2016. Using this functionality, buyers can not only search your punch-out catalog via mobile device but also search products that have been made available via the SmartFind options – Level II punch-out and LivePrice.

Note that if you have a punch-out site that can be accessed via mobile device, JAGGAER needs to verify the user experience to ensure that the buyers will not have adverse experience. If you are interested in making your punch-out catalog available via mobile devices for the buyers using the JAGGAER Procurement Solutions, please fill in a Supplier Support request form by [clicking here](#).

IMPORTANT: Updated Hostnames Need to be Used

This message is being sent to avoid customer disruption in case you have not taken any action in response to the topic in the February issue of SupplierNews. As indicated in the February 2017 issue of SupplierNews, the hostnames for Production environment have to be updated by the deadline below. **Failure to do so will mean that customers may not receive invoices from you!** Please review the details below and take appropriate action as soon as possible.

JAGGAER (formerly known as SciQuest) is working with suppliers to move integration traffic to servers specifically dedicated to handle this traffic in an effort to optimize the performance of the application for both suppliers and clients. **All XML integrations in the Production environments must be transitioned to these integration servers by March 14th 2017.** Details for the UIT environment have been provided as well.

Note that suppliers transacting with JAGGAER via EDI **are not** impacted by this change and do not need to take any action.

1. All XML integrations; cXML Invoice, cXML Order Confirmation and cXML Advanced Shipment notification integrations sent to the SelectSite platform needs to be updated with a new hostname (this is in the URL to which you post).
 - For the UIT environment, the hostname would need to be updated to replace `usertest.sciquest.com` with `usertest-messages.sciquest.com`.
 - Invoice:
<https://usertest-messages.sciquest.com/apps/Router/CXMLInvoiceImport>
 - Order Confirmation:
<https://usertest-messages.sciquest.com/apps/Router/CXMLReceive>
 - Shipping Notification:
<https://usertest-messages.sciquest.com/apps/Router/ASNReceive>
 - For the **Production environment**, the hostname would need to be updated to replace `solutions.sciquest.com` with `integrations.sciquest.com`.
 - Invoice:
<https://integrations.sciquest.com/apps/Router/CXMLInvoiceImport>
 - Order Confirmation:
<https://integrations.sciquest.com/apps/Router/CXMLReceive>
 - Shipping Notification:
<https://integrations.sciquest.com/apps/Router/ASNReceive>
 - SSL Certificates may need to be adjusted based upon how you trust certificates. Click on the links below to download the certificates for each environment.
 - UIT (`usertest-message.sciquest.com`) [Click here to download.](#)
 - **Production** (`integrations.sciquest.com`) [Click here to download.](#)
 - Open up your firewall to be able to send to these IP Addresses (if needed):
 - UIT: Inbound IP Address: [66.45.4.78](#); Outbound IP Address: [66.179.165.172](#)
 - **Production**: Inbound IP Address: [66.45.4.77](#); Outbound IP Address: [66.179.165.140](#)

Thanks for your help and patience. If you have any additional questions, please contact Support by phone at (800) 233-1121, Option 3 or by creating a support request by filling in this [Supplier Support Request form](#).
