### About Links Provided in the Image URL Attribute

Product images are very important for buyers as they help make an accurate purchasing decision. You can provide single image for a product in your hosted catalog using one of the two ways – by providing an image file or by providing web link for the image in the Image URL attribute. The latter, providing Image URL link, is much easier since unlike for providing image file, the Image URL attribute data can be loaded as part of content file.

To ensure that these links work as desired, you need to ensure that:

- The web links are for just the image itself and not for a web page the contains product image as part of its content
- The image served by the link should NOT exceed size limitation of 1024 X 1024 pixels

The Data Completeness Reports (DCRs) include analysis of a sample of most frequently used Image URL link values in your hosted catalog. It shows if the links being samples are providing image properly. The latest DCRs will be made available in the July issue of SupplierNews. Be sure to check out if your Image URLs are not working and need attention.

## SampleSQCustomer Site

We often provide information about how product attributes work, best practices for catalog content, importance of images etc. If you want to see how it all works out for buyers, you can check out the SampleSQCustomer site. Access credentials are provided in the Catalog Summary section of the newsletter.

As long as your catalog is not available as only a Science Catalog, we can make upto 100 random products from your catalog viewable so that you can view the products yourself. Note that we will load a dummy price of \$9.99 since this site is accessed by all suppliers in our network. Please check by your supplier name using advanced search to see products with demo pricing loaded for your catalog.

If your catalog is available as only a Science Catalog, we cannot make your products available since your actual pricing will be visible to all suppliers who access the SampleSQCustomer site. But this site will still provide you useful information about best practices for catalog content and let you see how buyers view your products.

## JAGGAER Security Upgrade to TLS 1.1/1.2

**As you may be aware, JAGGAER has been working on a plan to enhance security to our JAGGAER platform applications and action may be required by your IT department to ensure compatibility. Please forward this email to your IT Team so they can determine what action is needed.**

In an effort to increase security JAGGAER will be depreciating Low and Medium Security Ciphers (TLS 1.0, RC4, MD5, etc.) and will require connectivity using TLS 1.1 or TLS 1.2 in both UIT and Production. After this change is made, all connections to JAGGAER's SelectSite application will require use of TLS 1.1/TLS 1.2, and High-level security ciphers.

Action is needed if cXML is employed when sending Order Confirmation, Advanced Shipping Notification (ASN), Invoices/Credit memos to JAGGAER. **If you are not sure whether you will be affected, please have your IT team contact our Supplier Support group using contact information given below.**

To access details about the security update, such as timeline, list of updated ciphers etc. please [click here](#).

If you have any questions or concerns, please contact Supplier Support by phone at (800) 233-1121, Option 2 or by creating a support request by filling in this [Supplier Support Request form](#).
