Latest Data Completeness Reports for Your Hosted Catalog

As per the standard schedule to monitor data gaps in hosted catalog content, we have completed the second data quality evaluation for 2017. It is based on your hosted catalog content as of May 26, 2017. The Data Completeness Reports (DCR) is a multipage report, in pdf format, that includes results of evaluations of specific attributes important for customers. We evaluate hosted content to perform checks such as has CAS Number been provided for chemicals, if Image URL web link is indeed working as expected, if Product Size unit is getting mapped and so being displayed etc. Please refer to the overview document for details, including specific steps and tips to close any data gaps identified in the DCRs.

DCR May 2017 Overview Document

Please [click here](#) to access this document. It explains how to read these reports, how evaluations are performed and how to close the data gaps.

DCR May 2017 For Your Catalog(s)

This document is specific for each catalog. You can access the document by clicking on the link(s) below. Note that if you have multiple catalogs with us, a separate link for DCR of each catalog has been provided.

These reports will be shared with the customers by the end of August 2017. If you have questions about the DCR, or any aspect of the data quality evaluation, please contact Dr. Subodh Joshi at sjoshi@jaggaer.com.

Packaging UOM and Product Size Unit Mappings

When you check the Data Completeness Report provided for your catalog, among other details, review if any 'black bars' are seen next to Packaging UOM and Product Size attribute percentages. Such bars indicate that the unit values that you use for these important attributes are not being mapped to the JAGGAER Standard List of Units. In such case, the values are not being displayed in the main search results and are very likely making it difficult for a buyer to make a purchasing decision about your product.

- If you do have unmapped unit values in your catalog, please review the 'Qualitative Analysis – Product Size' report. It indicates top five specific unit values that are not being mapped. You will also find instructions to identify such values in content extract for your catalog so you can correct it and appropriate reference document.
- The SampleSQCustomer site lets you readily see the importance of having the unit values mapped. Please refer to last month's SupplierNews issue, June 2017, for information about accessing the SampleSQCustomer site.

If you have any questions or need help about unit mappings, please contact Dr. Subodh Joshi at sjoshi@jaggaer.com.
