Happy Holidays and Happy Faces!

Instead of showing our pictures this year, we are doing [something different, something interesting :-\)](#). But one thing is the same – the most wonderful time is upon us again! We all at the Supplier Integrations and Supplier Support teams hope that you too have had good accomplishments through the year to reflect upon. For us, it indeed has been, with

one of the reasons being your help to deliver results to our mutual customers. Thank you. Hope you have happy holidays and get geared up to greet a brand new year – 2018!

Product Flags in Hosted Catalogs

We have special types of attributes, the Product Flags, which are designed to flag a product for specific characteristic and not only make it readily visible to customer but also allow them to use these in workflow. For example, if a product is radioactive, you are expected to turn on the 'Is Radioactive?' flag which shows up as a specific icon in search results. Or when searching for file folders, buyers can filter search results to view only recyclable products, as mandated by their organization's procurement guidelines.

Note that:

- Product Flags are Boolean attributes that accept True/False or Yes/No as values
- The Catalog Management Template (CMT) already has columns for all Product Flags
- When generating the Data Completeness Reports (DCRs) that tells a customer how well data is populated in your hosted catalog, we evaluate data for two Product Flags – 'Is Hazardous Material?' and 'Is Controlled Substance?'
- Log into the SampleSQLCustomer site to see how Product Flags work. Your login credentials are provided in the Catalog Summary section at the top of this newsletter

The Catalog Management Handbook, available from the 'Online Training and Support' screen of your JAGGAER Portal, has all details including guidance for populating these important attributes.

Deleting Products from Your Catalog

As you work on updating your catalog content, keep in mind the two ways to delete products:

1. 'Content – Delete' submission: You need to provide Part Number values in the file that you wish to delete. This submission type lets you easily delete desired products.
2. 'Content – Replace All (Delete items not in file)': You are expected to load your current, complete catalog and as the name suggests, any existing products that are not found in the incoming file are deleted.

Note that when products are deleted, you will continue to see them in your JAGGAER Portal item search results and in content extract for 60 days. However, they will be in 'Marked for Deletion' status and no customer can see such products, even when there is a hosted price available. If needed, you can use 'Content – Reactivate' submission to readily make the products available again, as long as you do so within 60 days of deletion.
