First Data Completeness Evaluation Coming Up Soon

The Data Completeness Evaluation (DCE) is designed to make you aware of any data gaps that your hosted catalog content might have, affecting your buyers adversely. The data gaps can be missing attribute values, incorrect Product Flags, invalid image links etc. With the suppliers typically refreshing their hosted catalog at the end of the year, we perform first such DCE at the end of January each year. For 2019, it will be performed based on hosted content as of 25th Jan, 2019. The Data Completeness Reports with results of the evaluation will be made available in March.

Please [click here](#) to access the DCR Overview document which provides detailed explanation of how these evaluations are performed and how to close the data gaps.

Want to Check if Customer Approved a Price Set?

It is common for the suppliers to update pricing for their hosted catalog at the beginning of the year. Any hosted private pricing that you load for specific customer results in a new price set that has to be approved by the customer before it is effective and seen by the

buyers. Customers can take time to review the changes in a new hosted private price set and approve/reject it per their preference. You can readily monitor status of various hosted price sets in your JAGGAER Portal on the 'Price Sets' screen - Catalogs and Contracts > Hosted Catalog Items and Price > Hosted Catalog Price Sets >> Price Sets.

On this screen;

- You can view various details about each hosted price set such as Version number, Buyer Approval Status, Effective Date if any etc.
- The Description field is the one that you can populate when creating any submission and is a good way to tie a submission with hosted price set displayed here.
- You can use filters to look at hosted price set details for specific customer or approval status etc.
- You can generate various extracts, including formats viewed by customers
