Get Ready to Load "Promotional" Pricing!

We are excited to announce a new functionality that will soon be available for your hosted catalog – "ability to load promotional pricing"! It will let you load promotional pricing for your products which will be 'auto-approved' for customers. At the end of the specified period, the prices will revert back to the values as they were prior to promotional pricing being loaded.

This will let you handle such promotional pricing via a single submission and also not be adversely affected because of any delays in customer approval since it will be automatically approved.

This functionality will be available as part of our 19.2 Release which will be effective on 21st July 2019. As we approach the Release date, we will make more details available. The next month's SupplierNews issue, will have additional details as well.

CAUTION: Odd Characters in Part Number Values

Part Number values typically contain non-alphanumeric values such as hyphen, parenthesis etc. Such characters are handled fine in various processes within the JAGGAER Procurement Applications as well as client's ERP systems. However use of odd characters or Greek characters – such as mu, lambda etc – can cause unexpected adverse issues and are best avoided.

- Most common scenario is when such characters are not handled properly by the text file processing application and are replaced by odd characters such as '?' or '↓' without any intimation about the substitution
- Even if such characters are loaded fine, they can cause issues within customer's ERP system

If you have such characters in your catalog content in any attribute, not necessarily just Part Number attribute, be sure to open/edit the file using an application that can handle such characters properly. Generate an extract of your catalog content from your JAGGAER Supplier Portal and confirm that such data corruption has not already occurred. E.g. 'P123-50μg' is not showing up as 'P123-50?g' or as 'P123-50↓g'. If needed, correct the existing values or be sure to avoid such characters in attributes such as Part Number, Product Size, Packaging UOM in your catalog content.
