Sponsorship Opportunities at REV2019 Still Available

We are excitedly preparing for our premier event for suppliers and customers – [REV2019](#) – scheduled for Oct 1-3 at San Diego, CA! This annual event is a prime opportunity to network with decision makers from our mutual customers as well as prospect organizations. We had over 600 attendees last year, from more than 425 unique organizations.

This year too, we have a variety of sponsorship opportunities. E.g. Gold level (\$15,000) that includes a 10X20 booth, all promotional opportunities presented and six passes while Silver (\$1000) and Bronze (\$5000) levels include a 10X10 booth along with select opportunities. About a dozen of these are sold already but there still are few more available. In fact, in addition to these three, we have many more such as meal sponsorships, door drops, email marketing campaigns, signage/announcements at the event etc.

For additional details and to sign up for the sponsorship opportunities, please contact Suzanne Templeton at stempleton@jaggaer.com or 919-659-2237. To view the sponsorship opportunities in detail, [please click here](#).

Tips to Reduce File Size for Catalog Submissions

We have a 30Mb file size limit, for any type of catalog submission. While this does not affect most of the submissions, for large catalogs, it can pose a limitation. Here are some tips that will help if you are in such a situation;

1. If you are editing only specific attributes using a Content – Update/Add type content submission, include only those in content file. If you are not editing values for a 'data rich' attribute such as Product Description or Image URL, do not include it. You need to include only Part Number and the attribute values that are being edited in the content file for such submission.
2. For a proxy submission, normally True/False are used as proxy accessibility flag values. For a file with multiple proxy accessibility sets, this can substantially add file size forcing you to split the file into multiple parts. To help reduce file size, instead of True/False, you can use Y/N as flag values. E.g. for a file with 50,000 rows and 10 proxy accessibility sets with all rows filled with a flag value, switching from True/False to Y/N reduced the file size by over 50%.
3. As already indicated in the May 2019 SupplierNews issue, a tab delimited text file can be submitted as a zip archive. Be aware that while it is more convenient to use an Excel file, it adds substantially to file size. So you can continue to use Excel as your master data source but when creating a catalog submission, save the data as tab delimited text file and zip it for substantial file size reduction.
