### Product Release 19.3 In the Works

We are working on the last product release of the year, Release 19.3, which will be available in your JAGGAER Supplier Portal on 10th November 2019. In this Release, we are introducing features such as ability for customers to view the units values in multiple languages, enhancements around invoicing etc that are relevant to suppliers.

We will provide the details in the Supplier Release Notes once the Release is available. All the current functionality will continue to be available as it does at present and new functionality will be available to you as appropriate.

### We Now Support API Calls for OneShop Functionality

Our OneShop functionality allows us to retrieve live prices from a supplier's existing punchout connection for products in their hosted catalog with us, and we have many customers using this today. However, we now have the ability to use a supplier's 'API call' to achieve the same result. This method is more robust

and secure by design and would be our preferred way to implement OneShop functionality for any supplier.

If you have an existing price API or are thinking of developing one, JAGGAER would be interested in speaking with you! Please create a [Supplier Support Request](#) (Please mention 'API call for OneShop' in the Details field) and we can evaluate if it meets our prerequisites and can be used for the OneShop enablement for your catalog.

## **“Can We Provide This Data in our Hosted Catalog?”**

Some of the most common questions we hear, from new suppliers but at times even from suppliers that already have hosted catalog with us, are about data fields in their content – “Can we provide MFCD Numbers?”, “What fields about product dimensions do you support?” or “How can we make our old SKUs searchable as reference?”. You can readily check the list of Product Attributes, about 1100, that we support for hosted catalog products.

To access the “CategoriesAndAttributes” file which has these details, please log into your JAGGAER Portal and go to the Tools > Online Training and Support > View Online Training and Support screen. Refer to the Reference Materials section on right side and select the 'Item Categories and Attributes' link. Once you open the Excel file, refer to the Attributes worksheet.

The list also indicates if a particular Product Attribute is searchable, its field type etc. You can simply copy/paste the name into a new column in your content file and populate it for desired products.
