Supplier News - September 2020

New User Experience Available by Default

As a part of continued effort to improve user interface for various screens in our application, we have been making appropriate updates. Till now, we allowed the buyers to opt between old interface and the new one. Starting with our 20.3 Release, to be made available on Nov 9, 2020, we will make only the new interface available.

At present, for the Product Description attribute, we are limiting the number of characters that are displayed directly and buyer has to hover over it or go to Product Details to view full value. Please refer to the June 2020 issue of SupplierNews for more information about this. As a part of 20.3 Release, we will start displaying full value of the Product Description attribute and buyers will not have to hover over the short part to view the full value. However, keep in mind that concise Product Description values help buyers make a purchasing decision about the product. Please refer to the next topic for more details about this.

Use Concise Product Description Values

The Product Description attribute can have values upto 254 characters long. While this generous limit has been provided as a convenience, keep in mind that concise Product Description values help buyers make a purchasing decision about the product.

- There is **NO NEED** to cram text into Product Description just to make it searchable, as it can be conveniently provided in the Searchable Keywords attribute
- Many attributes – such as Manufacturer Name, CAS Number etc. – are searchable already. Please refer to the Categories And Attributes file to find which attributes are searchable
- Provide a relevant product image whenever possible

A short, concise Product Description helps buyers quickly confirm if the product in search results indeed is the product that they are looking for and make a purchasing decision. You can have a user experience from buyer's point of view by checking out the SampleSQCustomer site. The login credentials for the site have been provided in the SupplierNews email message.

About Third Scheduled Data Completeness Evaluation

We will perform the third Data Completeness Evaluation of all hosted content as per schedule. The hosted content as of 25th Sept will be considered for such evaluation. Please review the Data Completeness Reports (DCRs) for the last evaluation and close any data gaps as soon as possible. This evaluation is meant to identify any data gaps that might be causing adverse buyer experience for our mutual customers.
