

# JAGGAER Sourcing

Expand your Sourcing  
Capabilities for Greater  
Savings

**JAGGAER Sourcing** enables you to work collaboratively to build, issue and evaluate sourcing events via a secure online solution. From simple quotes to complex events, JAGGAER Sourcing streamlines the way you do business and lowers costs on both sides of the supply relationship.

Procurement teams are at the forefront of an organization's goals to increase revenue and competitive advantage. Creating a winning supplier eco-system, finding hard savings, and locating the best products and services are critical objectives for procurement leaders, but often a lack of efficiency and organizational process stand in the way. Organizations need to streamline and decentralize sourcing activities in order to expand reach. JAGGAER ONE Sourcing helps organizations achieve savings by increasing sourcing events, providing visibility into sourcing activities and prospective bidders and providing oversight and control over the sourcing process.

## **Intuitive and Efficient**

JAGGAER Sourcing is a solution designed to allow your team to quickly and easily create and execute RFQs. With an intuitive user interface and dynamic guidance, you can decentralize sourcing requests to your entire user community while maintaining security and process controls. Users can submit sourcing requests with necessary information pre-populated and submitted through our robust workflow engine for routing through approvals, completion, and award. JAGGAER Sourcing is designed to support all your users, from the novice submitting a quick quote on occasion to a procurement lead running robust events daily.

## **Powerful Capabilities to Reduce Costs and Save Time**

JAGGAER Sourcing makes it easy to manage all activities including RFXs, reverse auctions, multi-stage events, "best and final offers" (BAFO), sealed bids, and intent to bid notices. Event creation and management tools include dynamic templates and libraries for quickly building events using structured data to streamline the process

**JAGGAER** 

and provide meaningful reporting and analysis. Procurement teams can also utilize participant pre-requisites and price visibility controls to further manage the sourcing process. In addition, preferred suppliers can be presented or the JAGGAER Supplier Network is available for a broader bidder set. JAGGAER Sourcing allows procurement teams to ensure process compliance while expanding sourcing across the organization.

### Streamlined Collaboration and Increased Supplier Engagement

As suppliers are invited to bid on events, JAGGAER Sourcing provides tools to monitor participation and progress. Suppliers are invited to use the JAGGAER Supplier Portal to register, view events, respond, check on event status, and get notified of awards. The ease of use of the supplier increases competition and value by encouraging more suppliers to bid. Adaptive event management allows suppliers to adjust their bids on the fly based on real time feedback from buyers.

When its time to evaluate, users can analyze and award events using side-by-side evaluations (with or without pricing) for direct comparisons, both at a high level or question-by-question. Proposal packages can also be exported for offline analysis. Evaluation groups, panel questionnaires, and multi-stage events can all be configured based on the needs of your individual sourcing events. Dynamic auto-scoring provides drastic time savings for your team to make data-driven decisions. As your team selects a winner, JAGGAER Sourcing supports multiple awarding strategies to maximize savings.

### End to End Integration and Assurance

JAGGAER Sourcing seamlessly integrates with other areas of JAGGAER ONE providing seamless data and process workflows for identifying suppliers, conducting sourcing events, and negotiating contracts. Sourcing can be tightly woven into the contracts process and upon execution, sourcing items and services are easily available as a shoppable catalog as applicable. And as with all JAGGAER ONE solutions, JAGGAER Sourcing is enriched by a robust set of integrated web services capable of moving data between external systems, including industry leading ERP and P2P platforms. All of these features are underpinned by leading security and access controls for maximum peace of mind.

### Key Features

- Flexible event creation options
- Dynamic workflow approvals and routing
- Robust content library for templates, pre-requisites and items
- Mobile support
- Collaboration tools and no-fee supplier portal
- Automatic scoring and granular price visibility

### Benefits

- Standardize best practices and content for better analysis
- More spend under management
- Maximize savings
- Better purchasing decisions
