

Nobody Does Complex eSourcing Events Better

JAGGAER ADVANCED SOURCING OPTIMIZER (ASO) makes sourcing professionals more productive and efficient, particularly when it comes to complex eSourcing events.

With powerful features that take you from RFx creation to optimizing the award decision, Advanced Sourcing Optimizer has everything you need to manage comprehensive sourcing events.

ASO is the only complex automated sourcing solution that includes Expressive Bidding®, a two-way bidding process that allows suppliers to deliver unique characteristics that go beyond traditional sourcing event stats.

TRULY STRATEGIC SOURCING

Together with support for a variety of auction types and sealed-bid events, Expressive Bidding allows users to collect, evaluate and analyze the impact of different supply and market data, streamlining the supplier bidding process and consolidating items to save time and effort. With ASO, sourcing teams can move beyond tactical analysis and create strategic, bottom-line value.

Advanced Sourcing Optimizer allows a more strategic approach to sourcing decisions, evaluating the overall value of bids through real-world market conditions, supplier performance, innovation and total value. ASO aligns complex decision criteria with your rules, business goals and internal stakeholder preferences to arrive at a perfectly tailored decision that weighs costs and availability against risk, social responsibility and business value.

UNMATCHED FLEXIBILITY

With the scalability, performance and capabilities to tackle even the most complex sourcing events, our customer-proven ASO solution easily manages bidding events that encompass hundreds of suppliers and thousands of items. Our unique Expressive Bidding® creates a collaborative marketplace between buyers and suppliers. Suppliers can showcase their strengths and capabilities, helping buyers create more value through reduced costs, increased supply chain efficiency and recognition of new innovations during the sourcing process. Expressive Feedback lets buyers provide real-time guidance to suppliers, creating more competitive — and more beneficial — bid responses.

ROBUST REPORTING

View both management and specific detail-level reports, depending on your needs. Pre-configured Scenario Reports give you a view of your eSourcing results to identify potential risks, determine the cost impact of award preferences, and understand the specific effects on the supply base. The ASO Report Builder delivers even more flexibility in custom report creation with charts and graphs to gain additional visibility into your sourcing activities.

BETTER, FASTER DECISIONS

Our robust scenario optimization engine provides “what if?” scenario analysis with extensive data that other sourcing tools can’t access. ASO supports unlimited business rules to accommodate stakeholder preferences and corporate goals. These preferences are combined with pertinent supplier data in optimization scenarios that render results quickly so you can make better award decisions faster.

THE JAGGAER TEAM AT YOUR SIDE

One of the signature advantages of the JAGGAER Supplier Network are the dedicated, HQ-based Supplier Integrations and Support teams. Our supplier-focused teams ensure suppliers are able to leverage the JAGGAER Supplier Network in order to drive value for their business.

The Supplier Integrations team offers project management services for customers who decide to enable supplier catalog content in their shopping environment. JAGGAER Supplier Integrations team members own the enablement project and work collaboratively with both the customer and supplier to guide the enablement process to successful completion.

The Supplier Support team provides full-service support to suppliers for a multitude of issues ranging from navigating the initial registration process to troubleshooting order failures and punch-out outages, and more. Not only that but we provide training for suppliers as well.

BENEFITS AT-A-GLANCE

- Improve your spend under management by applying our eSourcing processes.
- Increase efficiency to achieve maximum savings for your most complex projects.
- Identify new places to save while sourcing with Expressive Bidding & Feedback.
- Reduce spending and savings “leakage” by making the most comprehensive decision to suit all stakeholders.

EASE OF ADOPTION

Wizard-based guides for RFX and eAuction configuration, event creation, bid analysis, and other features drive rapid adoption across your organization with expert guidance available along every step of the eSourcing journey.
