

MUST HAVE FEATURES

Supplier Scorecard

Improve Your Supplier Rating Process
and Make the Results Count

Do you know how good your suppliers really are? For a single category, location or for the whole company? In addition to covering the classic performance key figures, a truly informative rating model also covers soft factors, such as co-operative skills or the supplier's strategic potential. Collecting this feedback from numerous colleagues, departments and locations can be tedious. Many procurement departments often decide to leave it out altogether, or they simply resign themselves to a very lengthy evaluation process. As a result, corrective actions are delayed or not taken at all.

The Intelligent Supplier Scorecard

The pure Supplier Scorecard is a mature tool for your supplier management, allowing you to combine hard and soft facts. Intelligent rules and automated workflows make it possible to collect holistic ratings for your suppliers more often, and with no additional work. Use the flexible rating models for individual categories, locations or business groups. Make your results carry more weight by introducing a bonus-penalty scheme for your suppliers based on your assessment.

Your Benefits

YOUR BENEFITS

- Include hard and soft facts for holistic performance assessments
- Involve all relevant stakeholders, even if they don't have an account (One-time account option)
- Transparency improves cooperation with your suppliers
- Implement improvement measures right away
- View results based on supplier, plant, category and more
